

iCombi Pro / iCombi Classic

## MarineLine.

Safe cooking even in rough seas.

## MarineLine.

# Even in rough seas.

Every galley, whether on a ship, yacht or an oil rig, must have a reliable, efficient and flexible cooking system, which always provides high quality results.

The cooking systems of the MarineLine can meet the harsh requirements at sea. In addition to galley safety, seamless production, even in heavy seas, was a priority in development. The RATIONAL MarineLine is approved by the internationally recognised Germanischer Lloyd and complies with strict USPHS hygiene requirements. The MarineLine is available for all iCombi Pro, iCombi Classic and Combi-Duo electric models.

### ❶ Marine stands models XS 6-2/3 – 10-2/1

The cooking system is screwed onto the stand and its fixable stainless steel feet can in turn be screwed or welded to the floor or table. The cooking system can be prevented from slipping and tilting in this way.

#### Available unit elevation with fixable feet:

- › Stand I or stand I for Combi-Duo
- › Stand II or stand II baker's standard
- › Stand III
- › Stand IV

### ❷ Anti-tilting protection models 20-1/1, 20-2/1 and Combi-Duo

For standalone units, the stainless steel feet can be welded directly to the ship floor or fastened using special mounting kits to prevent slipping and tilting.

For the Combi-Duo, the lower cooking system is screwed onto the stand, which in turn can be screwed or welded to the floor.

The Combi-Duo kit has fixing points that enable the cooking systems to be fixed to the wall of the ship. This prevents both cooking systems from slipping and tilting.

#### The option includes:

- › Floor units with stainless steel feet
- › Mounting kit
- › Combi-Duo stand with fixing

### ❸ Door-stay

The flexibly adjustable door-stay softens the opening and closing movement of the cooking cabinet door and also fixes it in an open position. Even in heavy seas. Due to the flat design, the door-stay does not protrude and can thus also be used with Combi-Duo cooking systems.

#### The option includes:

- › Door-stay

### ❹ Hinging rack and mobile oven rack with safety mechanisms for Gastronorm accessories

A special upstand on the rack rails of the hinging rack and a fixing bracket on the mobile oven rack secure the accessory from slipping out. In addition, the joints of the mobile oven racks and hinging racks are welded all around and meet strict USPHS requirements. This guarantees the safe and hygienic use of the units at sea.

#### The option includes:

- › Mobile oven rack or hinging rack for MarineLine

### ❺ Impact protection for door (optional)

The external glass on the cooking cabinet door can, if required, be protected against damage by means of metal grid impact protection. Visibility into the cooking cabinet is ensured even when the door is closed.

#### The option includes:

- › Metal grid impact protection for the unit door
