

iCombi Pro / iCombi Classic

Externally attachable core probe.

Individual supervision with
full flexibility.

Externally attachable core probe.

Pinpoint results, flexibility and exceptional quality.

With the external core probes, you can expand the range of possible applications and also have better control the quality of your products.

You can use the sous-vide core probe to verify that the desired temperature in the food is achieved precisely and so that the food is always cooked perfectly.

❶ Sous-vide cooking

The special extra thin sous-vide core probe supports the cooking intelligence of the iCombi Pro to precisely achieve the core temperature without compromising the vacuum in the bag.

Product includes:

- > USB connection box with 2-point sous-vide core probe
- > Core probe holder
- > Magnet holder for the USB connection box

❷ Externally attachable core probes

The core probe has 6 measuring points and is used for all cooking methods. It can easily be used as a replacement for the internal core probe.

Product includes:

- > USB connection box with simple 6-point core probe
- > Core probe holder
- > Magnet holder for the USB connection box

❸ USB connection outside the cooking cabinet

Thanks to the external USB connection, the additional core probes are easy to install and easy to use in other cooking systems. When there is no core probe inserted, the USB interface is protected by a splash resistant cover flap.

❹ Magnet holder / holder for the core probe

The USB connection box is secured above the display with a magnetic holder. If you are not using the core probe, you can store this safely in the holder on the side of the iCombi Pro and iCombi Classic. The holder is removable for cleaning.
