**Integrated fat drain.**  
Easy grease disposal.

## Integrated fat drain.

# Fast, safe and economical.

The integrated fat drain is particularly useful when preparing dishes containing a great deal of fat, such as chicken or duck. It prevents grease from building up inside the drain system.

Dripping grease is caught inside the cooking cabinet and directed into special grease containers. An integrated shut-off valve lets users swap full containers for empty ones even during cooking, so that the collected grease can be disposed of in a safe, environmentally friendly way.

An additional lock protects collected grease during cleaning as well. The system minimizes the need for expensive and time-consuming grease trap maintenance, and the costs associated with grease and oil disposal.

### ❶ Integrated fat drain for Size 6-half size – 10-full size

The grease drip pan can simply be placed in the position intended for it, on the lowest rack of the cooking cabinet rails. The pan collects dripping grease and directs it into specially designed canisters, which can be stored conveniently within a RATIONAL iCombi stand (II or IV) to save space.

#### The option includes:

- › Grease drip pan
- › Drain pipe
- › Shut-off valve
- › 2 10-liter (2.64 US gallon) canisters

#### The following application-specific accessories are also available:

- › Stand II (open)
- › Stand IV (closed)

### ❷ Integrated fat drain for Size 20-half size, 20-full size

Special drip pans are placed in dedicated rails on the mobile oven rack. The drip pans and drainage rails catch dripping grease to collect it in the grease collection pan; from there, it is directed into a flat, coverable container. For maximum safety, that container is placed in a securely attached holding pan beside the cooking system.

#### The option includes:

- › Grease drip pan
- › 2 drip pans and drainage rails
- › Drain pipe
- › Shut-off valve
- › Grease collection pan, 1/1 GN, with handles
- › Holding pan

### ❸ Integrated grease drain for Combi-Duo

On Combi-Duo applications, the upper and lower units should each have their own integrated fat drains. Users will then need a Combi-Duo installation kit, as well as a matching Combi-Duo stand or leveling installation kit. Finally, users will need to connect the two drainage systems using a specially configured Combi-Duo fat drain installation kit, which contains the necessary pipes and brackets.

Depending on the specific configuration, grease is directed into either containers or canisters next to the Combi-Duo. Here, too, an attachable holding pan for the collection containers is available for secure storage.

For safe operation, Combi-Duos Size 6-half size on 6-half size or 6-full size on 6-full size must be mounted onto a Stand II for Combi-Duo, or a leveling installation kit.

Combi-Duos Type 6-half size on 10-half size or 6-full size on 10-full size must be mounted on leveling installation kit.

Specially designed Combi-Duo installation kits with integrated fat drains include the following elements:

- › Additional pipes
- › Holding pan
- › 2 collection containers, size 1/2 GN (only if using leveling installation kit)

## RATIONAL accessories.

❹ Transport cart for containers (Combi-Duo and floor models)  
Enables secure transport of filled canisters/containers for disposal.

#### The option includes:

- › Trolley
- › Removable handle
