### Water Quality

- Sodium ion exchangers are not recommended; H+ Ion exchange systems are recommended. Water that does not meet the following minimum standards will require the proper conditioning.

#### Contaminant | Water Requirements | If > than recommended
---|-------------------|---------------------
Sand/Particles | < 15 µm | Particle filter
Chlorine (Cl2) | < 0.12 gr/gal (0.2 ppm) | Active carbon filter
Chloride (Cl-) | < 4.68 gr/gal (80 ppm) | RO or deionization

### Clearance Requirements

To facilitate servicing, we recommend leaving a 18”-20” (450-500 mm) gap on the left-hand side of the unit. If there is not 18”-20” (450-500 mm) left side clearance available, provisions for moving the unit or appliance to the left for service access must be made. These include, but are not limited to, having quick connections (water, gas, etc.) and lengthened electrical connections with flexible cords. If there are no external heat sources acting on the unit, there should be a minimum gap of 2” (50 mm) to the left, right, and back of unit. If a high temperature heat source is on the left side of the unit, the left-hand gap must be a minimum of 14” (350 mm). This gap may be reduced to 2” (50 mm) by using a heat shield (see options). Recommended clearance from unobstructed rear exhaust pipes and any surface collecting grease or flammable material; 16” (400 mm) gas, 10” (254 mm) electric. It is recommended to have a hood overhang of 6” (150 mm) to 18” (450 mm) at the front of the unit and 6” (150 mm) on the side if installed at the end of the cooking line. Please refer to the Installation Manual for further technical data and for instructions on installation and setup. Installations must comply with all local electrical, plumbing, and ventilation codes.
