ConnectedCooking.

Network your kitchen.

ConnectedCooking is the world’s most state-of-the-art cloud-based networking solution for professional kitchens. Whether you own one RATIONAL unit or several, ConnectedCooking opens up a wealth of new and convenient possibilities. All you have to do is connect your RATIONAL unit to a network.

Discover what ConnectedCooking can do for you! It offers assistance exactly when you need it, takes time-consuming activities off of your hands, and ensures the food safety you expect in your kitchen.

With ConnectedCooking, you always know what’s going on in your kitchen, and you can even make adjustments when you are not on-site. And now, it’s easy to transmit cooking programs to all of the units in your kitchen.
With ConnectedCooking, you'll always know exactly what all of your SelfCookingCenter® or CombiMaster® units are doing. Totally convenient. Always under control. Totally automatic.

Push notifications

With ConnectedCooking, you'll never miss anything happening with your units. Tiny little pops and pings alert you to everything from when a unit is ready to load, finishes a cooking process, or needs service, you'll receive real-time information via push notifications (on all connected devices). You can check the settings on each unit, adjust them as needed, and even set up reminders for certain times or events.

Remote access

The remote access feature lets you control any of your connected units from anywhere. You can check the settings on each unit, alter settings (on all connected devices), which minimizes the possibility of user error. You can set up as many user profiles as you need, so that ConnectedCooking will remember exactly the way you want it.

Software updates

Updates ensure your system is always up to date. Many new features and capabilities are added regularly, so that you can always use your equipment to its full potential. Software updates ensure that your data is always secure and protected.
